

# VanillaStack

#CloudExcellence #VanillaStack

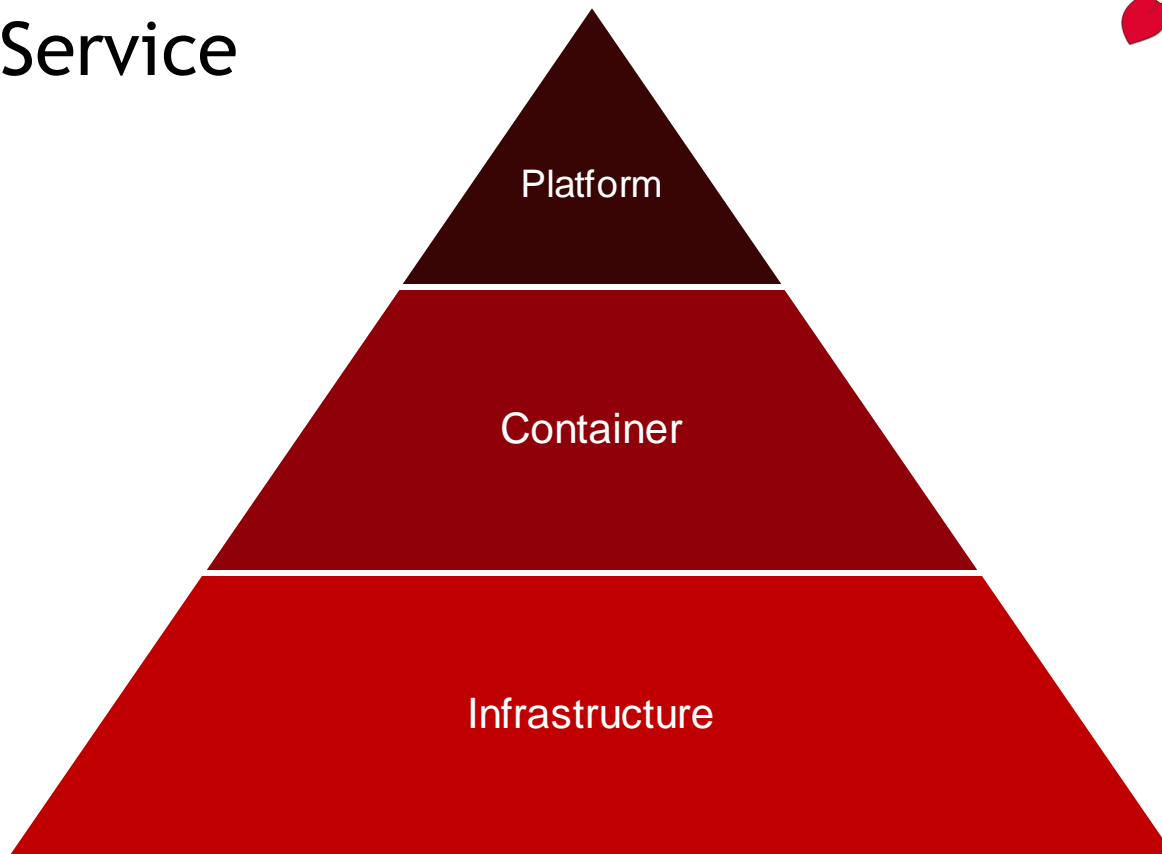

# Current challenges in IT

Customers and Stakeholders expect more:

- Greater Flexibility in Infrastructure
- Faster Deployments
- Faster Reactions
- Better Scalability
- 24/7 Availability
- Automation
- Governance
  
- Lower Costs :-)

# Everything as a Service

Let's do Cloud!

Lift & Shift  
Fast and Simple

Container  
...Solving all Problems?

# Kubernetes

- ✓ Container-Orchestrator
- ✓ Self-Healing Services
- ✓ Automatic Load Management
- ✓ Security by Design
- ✓ 100% Open-Source
- ✓ Huge Community

# Challenges for Open-Source-Solutions

Challenging ecosystem:

- Proprietary solutions are pushed with huge sums
- Integration efforts for Open-Source projects
- Vendor-Lock even with Open-Source-Solutions
- Vanilla-Projects often understood as not „*ready for prime-time*“
- Ecosystem? What ecosystem?

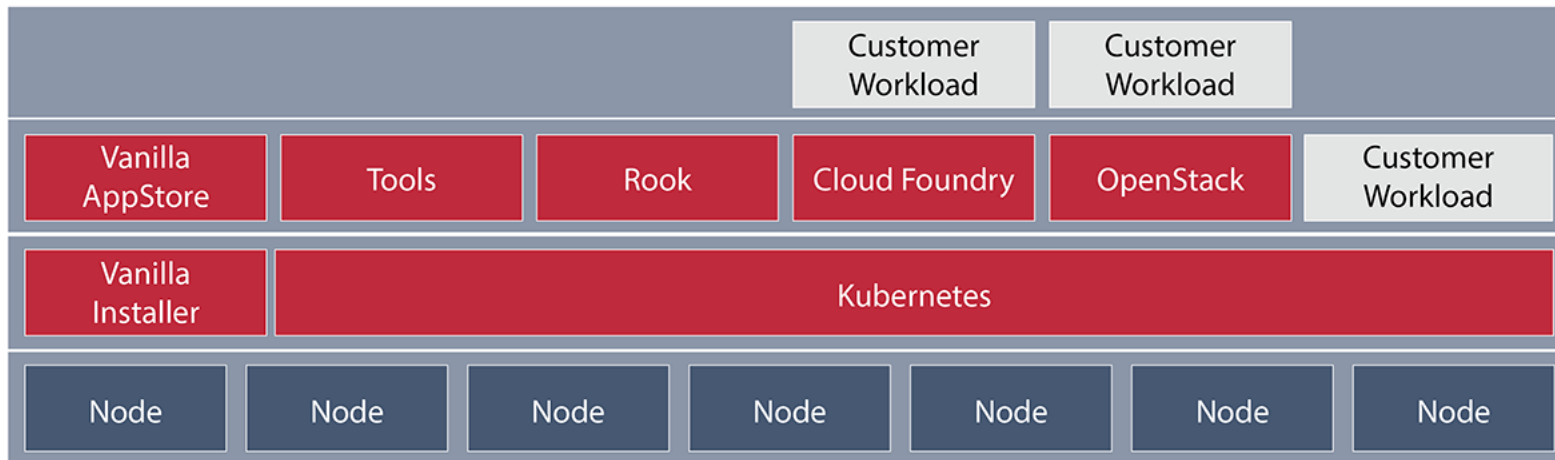

# VanillaStack

- ✓ Enterprise Open-Source Cloud-Stack
- ✓ Bring your own Linux
- ✓ Kubernetes as Operating System
- ✓ Full Commercial Support

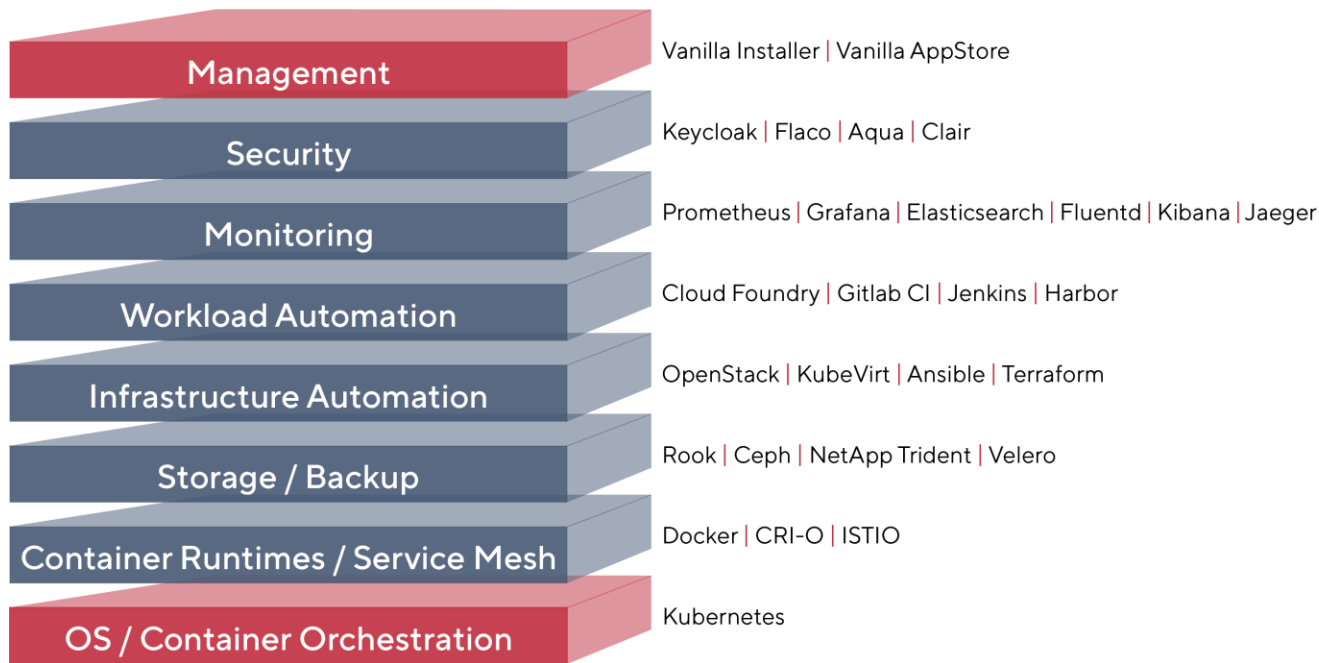

# True Open-Source

- ✓ 100% Open-Source Projects
- ✓ Vanilla-Editions of Projects
- ✓ Support for the Community
- ✓ No Vendor-Lock!

# Complete Open-Source Stack

# Because Simplicity is Best

- ✓ Components to be rolled out automatically
- ✓ Initial installation via VanillaInstaller
- ✓ Installations and updates via VanillaStore
- ✓ Out-of-the-Box-Integrations and operability

# From Platform to Ecosystem

- ✓ Open by design and mindset
- ✓ Vanilla-Projects
- ✓ No Vendor-Lock!
- ✓ Can be expanded with a huge amount Open-Source- and Commercial-Components
- ✓ Ecosystem instead of proprietary solution

# Trustworthiness

100% Open-Source, 100% Support

# VanillaStack runs everywhere!

✓ Bare-Metal

✓ VMs

✓ Private Cloud

✓ Public Cloud

✓ Oracle Cloud

✓ AWS

✓ Azure

✓ Google Cloud

Demo:

# VanillaStack Installer

# Use-Cases

# IaaS on VanillaStack

- ✓ OpenStack HELM
  - ✓ Rook or Ceph as Storage
  - ✓ Installation via AppStore
  - ✓ Roll-Out and Operations in <40min!
- ✓ Recommended Configuration:
    - ✓ 3 Master-Nodes for HA
    - ✓ 5 Worker-Nodes for Workloads
    - ✓ 20+ Cores for OpenStack Worker
    - ✓ 64+GB RAM for OpenStack Worker

# PaaS on VanillaStack

✓ Kubernetes as Base

✓ Harbor for Images

✓ Rook as Storage

✓ ISTIO as Service Mesh

✓ GitLab, Jenkins or Cloud Foundry

✓ Recommended Configuration:

✓ 3 Master-Nodes for HA

✓ 3 Worker-Nodes for Workloads

✓ 20+ GB Storage

# Ops on VanillaStack

✓ Prometheus

✓ Grafana

✓ ELK

✓ Rook or Ceph as Storage

✓ Rolled Out and directly usable

✓ Recommended Configuration:

✓ 3 Master-Nodes for HA

✓ 5 Worker-Nodes for Workloads

✓ 40+ GB Storage

# Community

# VanillaStack IS community

Community-driven open-source

# Roadmap

- ✓ Open-Source: **Now**
- ✓ Available under Apache 2.0: **Now**
- ✓ Community-Contributors: **Now**
- ✓ Reaching out to LF- and CN-projects: From Oct, 1st
- ✓ Hand-Over to VanillaFoundation: Q1 2021

# Availability

# VanillaStack Availability

✓ Preview Version: **Today**

✓ Forums: **Today**

✓ VanillaInstaller: **Today**

✓ Documentation: **Today**

✓ VanillaStore: Sep. 29

✓ Commercial Support: Sep. 29

✓ Final Version: Sep. 29

# Road Map

# VanillaStack Road Map 2020

✓ Fedora / CentOS: **Today**

✓ Remote Installer: Nov. 2020

✓ Debian / Ubuntu: Oct. 2020

✓ Cloud Installer: Dec. 2020

✓ Commercial Linuxes:

✓ RHEL: Oct. 2020

✓ SLES: TBA
