

## POST-EVENT REPORT

## OVERVIEW

**Open Observability Summit** and **OTel Community Day** came together under one event, to feature two community-driven tracks exploring the future of open source observability. This event was created to bring the observability community together to collaborate, learn, and advance open source observability tools and practices.

**Open Observability Summit** was uniquely designed to bring together developers, operators, and business leaders passionate about leveraging open source technology to gain deeper insights into their systems and applications. This track was community-driven, ensuring that all aspects of the conference, from discussions to workshops, are relevant, practical, and tailored to meet the real-world needs of the open source community.

**OTel Community Day** was the place for maintainers, contributors, and users of OpenTelemetry (OTel) to come together and celebrate both our open source work and our successes with Observability.

Planning is underway for 2026. Full event details to be shared in the coming months — follow us or reach out to [events@cncf.io](mailto:events@cncf.io) to stay informed.
